

# HOW TO SCALE-UP IN THE FUTURE

CenturionPro prides itself on understanding the diverse needs of cannabis and hemp producers, recognizing that the demands on them are ever increasing. As markets emerge and expand globally, cultivators must scale operations alongside the industry to remain competitive and maximize profits. This is why CenturionPro offers a trade-in program on all its trimmers, so customers can exchange any used machine for credit towards an enhanced elite harvesting solution.

## BENEFITS OF UPGRADING YOUR MACHINE

Perhaps you began as a small operation with a CenturionPro Mini trimmer, but the growing marketplace has driven demand and now you are looking to upgrade to the Gladiator. While some cannabis producers have the finances to buy an upgraded trimming machine and also keep their smaller one, not all producers have the extra cash flow to invest in a brand-new machine outright.

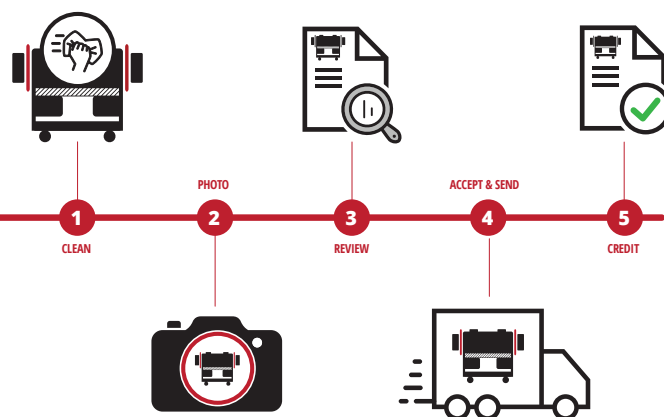

**THIS IS WHERE OUR TRADE-IN PROGRAM COMES IN HANDY, AS IT IS DESIGNED TO HELP BOOST YOUR BUSINESS AND SAVE YOU MONEY!**

You can send back your CenturionPro Mini trimmer (or any other unit) in exchange for credit towards a new trimming solution, subject to a machine inspection. Regardless of which machine you upgrade to, you can receive trade-in credit on your old machine and increase your productivity!

## HOW THE PROGRAM WORKS

- STEP 1:** Clean your trimming machine and ensure it is in decent condition.
- STEP 2:** Take photos of your cleaned trimming machine and send them to us at [sales@cprosolutions.com](mailto:sales@cprosolutions.com).
- STEP 3:** We will review the photos and offer you a credit if applicable.
- STEP 4:** If you accept the offer, send your trimming machine to us.
- STEP 5:** Once the trimming machine is received, you can put the agreed credit towards the purchase of a new one.

## CENTURIONPRO RAIL SYSTEMS

The Rail Systems enable growers to connect CenturionPro trimmers end-to-end, for an enhanced cannabis and hemp harvesting solution. Connecting machines delivers unrivaled power and precision, with growers empowered to better match throughput to grow size and increase processing capabilities as they expand their operation. With this innovation, multiple machines can be controlled by a single user, for a more streamlined process and improved profitability.
